PROFESSIONAL SUMMARY

Telecommunications Engineering bachelor (2026) with hands-on experience in network deployment and configuration, as well as fullstack web development. Skilled in troubleshooting and technical problem-solving. Adaptable, detail-oriented, and eager to contribute in dynamic, solution-oriented engineering teams.

WORK EXPERIENCE

Fullstack Developer Intern — BPPMB Tekmira *June 2025 – August 2025*

- Developed a fullstack book buy-and-sell web application end-to-end using React, Express.js, and PostgreSQL
- Built core features including user authentication, product (book) management with full CRUD operations, and transaction flow (cart, checkout, and payment process)
- Designed and implemented RESTful APIs connecting the React frontend with the Express.js backend, and structured the PostgreSQL database schema

Telecommunication Engineer — PT Maktekindo *August 2021 – March 2022*

- Installed and configured MPLS networks across 12 different stations, ensuring stable interconnection between stations via Fiber Optic (FO) links using ERPS and ELPS protocols
- Supported cross-team data retrieval from interconnected MPLS-linked devices to ensure smooth coordination between related parties
- Conducted hands-on training for KAI (Kereta Api Indonesia) personnel on the operation and configuration of newly deployed network devices

Network Installation Engineer — PT Maktekindo *May 4–7, 2025*

- Traced and identified point-to-point (P2P) fiber optic paths between two stations (LC duplex, 4 cores per side, 4 SFPs total) to support MPLS link configuration
- Configured MPLS routing to carry E1 traffic toward the Access Multiplexer (AM), enabling voice/data communication between stations over the MPLS link

Admin — PT Rejeki Marino KSO *July 2021 – October 2021*

- Prepared work reports and documentation for warehouse operations
- Tracked and recorded the volume of goods entering and exiting the warehouse
- Compiled weekly progress percentage reports and S-Curve charts to monitor project timelines

EDUCATION

Telkom University Bandung, West Java
Telecommunication Engineering — Undergraduate *2022 – 2026*

- Member of HIPMI (Himpunan Pengusaha Muda Indonesia) student organization
- Lab Practicum, Cyber Physical System Laboratory (2024 – 2026)

NON-FORMAL EDUCATION

Network & MPLS Training — PT. Infokom – Internusa *August 2021*

Trained on hardware and network device fundamentals, including label switching concepts, traffic direction using labels, and implementation of the MPLS protocol across various network devices.

SKILLS

Technical / Networking: MPLS (P2P & Ring topology), ERPS, ELPS, E1 Interfacing, Fiber Optic Tracing & Identification, Network Troubleshooting & Configuration

Programming / Web Development: React, Express.js, PostgreSQL, REST API, JavaScript

Software: Microsoft Excel, Microsoft Word, Linux, CLI / Command Line, VS Code
